Introduction:

Our project explains about the registration management. This project mainly explains the various actions related to registration details. This project shows some ease in login, logout and register the details.

Our Project Includes:-

- Login Page
- Registration page

I have developed this Application in **Java, JSP, Servlets and MySQL**. It's a web based projects so I have used HTML, CSS also.

The main feature of the project is to do the registration and see the details are registered or not.

In Login page just do the login through userid and password.

In Registration page you have to fill the details like userid, password , firstname ,lastname and email.

Software Requirements :

Front end: Java/J2EE technologies (Servlet, JSP), HTML, CSS, JDBC.

Back end: MySQL.

Middleware/Server: ApacheTomcatv7.0.

IDE: Eclipse IDE for Java EE Developers

Browser: Best result on Google

Chrome Operating System: Window XP
